

**PARHELIA.BIO**

To Whom It May Concern:

Parhelia Biosciences Corporation is the sole source provider of our Parhelia Omni-Stainer™ platform. The Parhelia Omni-Stainer™ and our companion components are the only multi-sample tissue staining instrument on the market that fits on a benchtop and is compatible with automated liquid handling robots like the Opentrons OT-2.

The combination of the Omni-Stainer™ and the OT-2 robot allows open-source programming for operators to customize protocols. The combination provides an unparalleled degree of customization and flexibility to both the robotic software and hardware. In addition, Parhelia provides some protocols which we have established for common tissue staining and can create customized protocols upon request.

Finally, the combination of the Parhelia Bioscience Omni-Stainer™ and the Opentrons OT-2 is the lowest-priced tissue auto-staining platform on the market. If there are any other questions on the uniqueness, affordability, or flexibility of the combined Parhelia and Opentrons platform, please do not hesitate to contact me at [nikolay@parheliabio.com](mailto:nikolay@parheliabio.com)
